## HAZWOPER TRAINING

### Description

Forty (40)-hour course intended for Response Team members on contaminated sites. This course meets the requirements of OSHA 1910-120.

### Course Objectives

Give participants the required knowledge and have them practice techniques for working on contaminated sites, i.e.:

- Identify hazards ;
- Select appropriate personal protective equipment ;
- Evaluate a situation, and respond within an Incident Command System ;
- Select appropriate response techniques and procedures.

### Through briefings, workshops and drills, participants will learn how to :

- Learn how toxic substances penetrate into the organism, and their effects ;
- Identify hazards and hazardous materials by consulting reference documents and manuals, or by using detection devices ;
- Select and use appropriate personal protective equipment and clothing ;
- Implement an Emergency Response plan ;
- Carry out tasks and functions assigned within the Incident Command System in place on an incident site ;
- Assess risks on an incident site ;
- Identify site-related hazards, assess risks, and take appropriate control actions ;
- Decontaminate responders and accident victims before they are taken to the hospital ;
- End the response, report observations, and recommend corrective actions.

### This course is intended for :

- Members of Emergency Response Teams in the industry and public services ;
- Health, Safety & Environment Managers and Specialists ;
- Consultant Experts.
